Confusion  
over QL  
software

AN announcement by Sinclair's managing director, Nigel Searle, that the four Psion QL software packages will be released in an enhanced form on a plug-in Rom pack seems to have resulted in some confusion.

According to Psion's sales marketing manager Gerry Kelly negotiations between the two companies are still at a preliminary stage, and no agreement has so far been reached.

Yet Nigel Searle publicly stated that the Psion's *Xchange* suite of programs (a much up-graded version of *Quill*, *Easil*, *Archive* and *Abacus*) will appear on the QL as a single 128K Rom cartridge option which connects to the expansion port on the QL. Psion's managing director declined to confirm Nigel Searle's claim: "Psion has made no statement about doing the *Xchange* programs on Rom on the QL."

Psion will however release in the Autumn Version 2 of its Microdrive programs for the QL. The upgraded packages will be supplied free to QLub

Warner sells off  
Atari for \$240 m

THE surprise sale of Atari to a new company headed by ex-Commodore president Jack Tramiel has now taken place (see PCW, July 5). Tramiel's first move after taking over has been to substantially cut the workforce. Several hundred of the 1,000 employees at

the company's Sunnyvale headquarters will be laid off this week and Atari's El Paso manufacturing base has been closed with the loss of 300 jobs.

Tramiel who founded Commodore, and turned it from a typewriter importer to a computer company, has set up Tramiel Technology Ltd (TTL). It bought the home computer and video game divisions of Atari, leaving Warner Communications with the coin-operated games section and AtariTel, a new telephone making project. However, it is thought Warner intends to sell these as well.

Jack Tramiel

# THE KEY TO PROFESSIONAL GAMES DESIGN ON THE SPECTRUM 48K

## THE GAMES LANGUAGE OF THE 80'S!

Now, without any knowledge of machine code, you can write fast, smooth, professional, totally original games and market them **without paying royalties**.

Even if you have already mastered machine code, we believe that the time and problems saved by writing in **White Lightning's** FORTH-based high level language could revolutionise commercial games writing for years to come.

**IDEAL** IDEAL is an Interrupt Driven Extensible Animation sub language. Once you have mastered IDEAL's easy to learn set of over 80 commands and just a little FORTH, you will be ready to produce arcade-quality games, even if you don't know machine code. Up to 255 Sprites, each with its own user-defined dimensions can be moved around the screen (for memory), scrolled, spun, reflected, enlarged or inverted with amazing speed and smoothness. Operations are possible between screen windows. Sprites and Sprite windows. Sprites can even stretch across several screens, so those difficult scrolling landscapes that form the basis of so many games are easy to achieve. Sinclair's own sound and graphics commands such as CIRCLE, DRAW and BEEP are fully supported, and there are some unique collision detection facilities.

**MULTI-TASKING** Because **White Lightning** uses interrupts, you can effectively run two programs at once. This means of course, that games like *Space Invaders* and *Defender* can be written without complex timing calculations. So while one

program smoothly scrolls the landscape, the second animates the other characters. This is undoubtedly one of **White Lightning's** most powerful features.

**MARKETING AND PORTABILITY** Although **White Lightning** uses an integer FORTH as its host language, programs can be written in a combination of BASIC, FORTH, IDEAL and machine language.

What is more, programs written in FORTH/IDEAL will be highly portable between the Spectrum and implementations under development for other popular micros. When it comes to marketing your completed games, there's no problem either. In fact Oasis themselves will offer to market outstanding software.

**SPRITE DESIGN** **White Lightning** comes complete with a separate 20K program for developing the Sprites used in the main system. Not only can you use this to design your own Sprites from scratch, it also comes complete with 168 pre-defined characters covering games like *Asteroids*, *Pac-Man*, *Assault Course*, *Defender*, *Space Invaders*, *City Bomber*, *Lunar Lander*, *Frogger*, *Centipede*, *Donkey Kong* and many, many, more. These characters are ready to use or can be enhanced. And Sprites can be saved to tape between editing sessions before being finally loaded into the main program.

The High Level  
Graphics Development  
System for the  
SPECTRUM 48K.....

**OASIS SOFTWARE**

AND COMING SOON!

### How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

### Accuracy

*Popular Computing Weekly* cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

**S**o, who's going to buy this machine from Commodore, the Plus/4?

At first glance it looks attractive, a 64K machine with built-in word processing, spreadsheet, graphics and database software all for a little under £250.

But the machine also falls rather badly between two stools. Its four software programs are, at best, primitive — a tenth of the size of the four equivalent programs on the QL. So the Plus/4's Rom software will quickly prove inadequate for all but the simplest applications.

If the cost of a QL at £400 is too much then why not buy a Commodore 64? While the Plus/4 has the advantage of a better Basic and Ram available (60K compared with 39K), the 64 is two-thirds the price with a huge library of commercial programs already written for it. You can buy a top-flight word processor program — *Paperclip*, or the less expensive *Easy Script* — and still have change from £250.

Unlike Sinclair with the Spectrum and the QL, Commodore has got itself into a bit of a hole. In performance terms the Plus/4 is not a great advance on the 64. Certainly it is nothing like the jump from the Vic20 to the 64.

This will make life rather difficult for Commodore. It must promote the two similar machines in very different ways — the Commodore 64 will become the 'games' machine and the Plus/4 will be for 'serious' use (hence the four rather trivial built-in programs).

But it won't be that easy. The 64 is quite capable of serious application and unless Commodore is very careful it may find that the 64 continues to sell at the expense of the Plus/4.

Commodore can of course solve the problem by taking deliberate steps to kill off the 64. Are they ready to do that yet, when the QL is still so successful? I doubt it.

### Meet the perils of refuse in **TRASHMAN – Commodore 64** **£7.95**

The job may look easy but only you know the hazards. Speeding cars, cyclists, vicious dogs, over-reacting in the transport cafe or one too many in the pub! A Trashman's lot is not an easy one. Discover just how difficult for yourself in TRASHMAN on the Commodore 64.

### **ESCAPE & 3D TUNNEL –** **Commodore 64 £7.95 each.**

Follow the thrills!  
What lies in the tunnel's depths? Flying bats, leaping toads, scurrying rats, crawling spiders and there may be more... appearing live in the dreaded 3D TUNNEL.  
Meanwhile, in the maze on the estates, what horrors lurk in the hedges? Where is the axe hidden? What prehistoric terrors will trap you? Can you survive the dinosaurs and the pterodactyls? Find out in ESCAPE if you dare! Available on the Commodore 64.

### **GATE CRASHER – BBC/ ELECTRON £6.95**

An intoxicating game for the BBC and ELECTRON.  
Do you enjoy being killed by aliens? Has your keyboard melted away under the heavy artillery? Do you have nightmares of swooping birdmen?  
If so this is the game for you ... it has none of these!  
GATE CRASHER is a game of skill and strategy that will test your mind to the limits, PLUS you will also have the opportunity to WIN £200!

### **ELECTRO-ART – Electron** **£14.95**

Son of BEEB-ART!  
Create your own works of art with this simple to use, yet sophisticated feature-rich art tool which includes a full machine code 'Paint' routine allowing you to colour fill any shape. ELECTRO-ART is supplied in a box with a full instruction manual.

### **VELNOR'S LAIR – Oric 1/Atmos** **£6.95**

Battle the evil Wizard Velnor in the caves of Mount Elic. VELNOR'S LAIR is simply the most enjoyable adventure you will play on your computer!

### **MINED OUT For the worm.** **Oric 1/Atmos £6.95**

Following his success on the SPECTRUM, ELECTRON, BBC, LYNX and DRAGON, Bill the worm is now appearing in MINED OUT on the ORIC 1/ATMOS computers.

### COMING SOON

### **ANT ATTACK – Commodore 64** **£8.95**

The outstanding Soft-Solid 3D graphics of the breathtaking city of Anteschier are now available on the Commodore 64. Battle the giant ants to save your hero!

### COMING SOON

### **FRED – Commodore 64 £7.95**

Action beneath the pyramids! Fearless Fred, the Intrepid Archaeologist, searches the creepy catacombs below the torrid tomb of Tootecarmon!

### COMING SOON

### **GAMES 84 – Spectrum 48K**

From the advanced programming project division of the SOFTWARE STUDIOS – GAMES 84, an Olympiad spectacular!

## Atari

continued from page 1

TTL paid \$240m (£178m) in total for the Atari computer and video game divisions, and also acquired warrants giving it the option of buying one million Warner common shares.

The sale of Atari to Tramiel was unexpected. It was known that Warner had been looking for a buyer for the last year, but the Dutch-based company Phillips were thought to be main contenders.

The future of Atari projects such as its up-market \$1,000 home computer and the video games designed by Lucasfilms is now unclear.

Atari's rise and fall in the computer market was meteoric. Warner bought the company for \$27m, and saw Atari's sales rising to \$2bn in 1982.

## QL software

continued from page 1

members. Explained David Potter, "We are not satisfied with the speed of *Quill*, for instance, since the QL doesn't have a dedicated video chip to speed up the process of printing to the screen. Version 2 cures the problem." Another new feature of Version 2 is 3D bars on the *Easil* program.

Sinclair has announced the names of eleven software companies producing material for the QL. They are: Digital Research, Sagesoft, MicroApl, Seicon, Quicksilva, Lattice, Metacomex, Caxton, Pison, GST and Intelligent.

Digital is expected to produce a range of languages for the QL. Sagesoft is converting its accounting suite. Intelligent will produce a chess program. Sinclair is working on a number of peripherals for the QL, the first of which will be a 128K Ram board.

This will be followed by a 512K Ram board, Winchester disc interface, combined Modem (from Prism) and terminal emulator, monitor, printer IEEE interface and combined Centronics and Unix hard disc expansion unit. Sinclair is currently negotiating for the Unix operating system to be put onto the QL.

The QL manual is to be substantially revised and existing manuals will be upgraded in August.

But in 1983, sales almost halved and Atari suffered a loss of \$538.6m.

Last September James Morgan was bought in from Pepsi by Warner as chairman. He set a target of profitability for Atari by the fourth quarter of 1984, and scrapped many Atari projects, which did not look to be immediately profitable. He also cut staff by 1000 in order to reduce overheads.

Morgan, however, has left the company since the TTL sale went through.

Tramiel's strategy at Atari will be to concentrate on the low cost computer market — thus bringing it directly into competition with Commodore.

## Imagine hits more trouble

IMAGINE, the troubled Liverpool software house, was still holding its head above water last week, although over two thirds of the staff have been laid off.

On Monday, July 2 a court ruling gave the company seven days to pay a £10,000 debt to VNU Business Publications. To raise the money Imagine last week sold 110,000 tapes from stock at 30 pence each to a German wholesaler. So far Imagine's creditors have twice called in bailiffs to the company's Liverpool offices, and Merseyside police are also "monitoring" Imagine's affairs, regarding non-payment to its creditors. The police spokesman stressed that no investigation into Imagine's affairs has yet been started.

## Fast action against piracy

A NEW group has been set up by representatives from all sides of the computer industry to press for action against software piracy.

FAST (Federation Against

Donald Maclean, chairman of FAST

## Tandy withdraws from Dragon talks

TANDY has dropped out of negotiations to acquire in part the assets of the failed Welsh micro manufacturer Dragon Data.

The company had hoped, said managing director John Sayers, to have acquired the Dragon name and finished goods stock in order to provide support for existing users.

However, Tandy has now decided that there is no possibility of restoring profits to the Kenfig assembly plant and, having failed to reach an agreement with the receivers Touche Ross, has pulled out.

This leaves only one company — GEC — still in the bid-

ding for Dragon Data. A GEC spokesman declined to comment on the situation but it is widely expected that GEC will now continue to market the Dragon machines, with the Dragon 32 dropping in price.

Its launch of the Dragon MSX machine at the Personal Computer World Show in the Autumn now seems likely to be delayed until early 1985, because of component shortages. John Hiley, GEC's marketing support manager, said, "I am not aware of any problems surrounding an MSX machine, but then GEC has not made any public statement regarding MSX at all."

## Full of Eastern promise

MELBOURNE House is producing a joystick-controlled adventure for the Commodore 64 called *Zim Salabim*.

The game's format is reminiscent of Sierra's 128K Apple adventure *King's Quest*. While you control the main character around the screen with the

joystick, text input is also required to make the character perform actions, such as eating and drinking. The action of the game is based on Arabian Nights' tales.

*Zim Salabim* will cost £8.95 and should be released at the end of September.

Software Theft) specifically aims to lobby parliament in an attempt to get the 1956 Copyright Act updated so that it expressly includes computer software as protected material.

Donald Maclean, deputy chairman of Thorn-Emi Video Ltd, and chairman of FAST, said, "It looks like there will be no time in this parliament of the next to pass a bill amending the Act, so we went to do it through a private members bill."

Nicholas Lyall, MP for mid-Bedfordshire, has pledged his support for FAST and will be presenting a bill to parliament

under the ten-minute rule on July 24. Under this hearing, the matter can be aired, and can pave the way for a private members bill.

## Running total

SINCLAIR is again sponsoring the Cambridge Festival half-marathon on July 15.

Among this year's entrants are Olympic runner Joyce Smith, last year's men's winner Bob Treadwell, Sir Clive Sinclair himself, and an entrant from the Falkland Islands. The total number of runners will be a record 2,500.

## Micro dilemma

I was interested to read AJ Pimperton's criticism and comments on my article on Psion's Quill package and his remarks on a letter in the same issue. I think his comments that I compared the software business with business software rather than home micro software encapsulates a dilemma that the home micro industry will be faced with in the forthcoming year.

The breed of machines that are appearing — the MSX machines, the Advance, the QL and many more to come are no longer just games machines; they are capable of serious use, and compare favourably with existing single-user business systems.

Sinclair Research has clearly aimed the QL at the serious user, otherwise it would perhaps have included joysticks and free games software as part of the package. This means that the small retailer, to take an example of a potential user, wanting to computerise his business is looking at the QL in comparison with the likes of Apple's Macintosh, Act's Apricot, and the Osborne, and its bundled software. So the QL's software will be compared with such packages as Wordstar, Supercalc, Multiplan and dBase.

Packages such as Tasword and Telewriter have made the serious use of the home micro affordable, and I am an enthusiastic user of Tasword and have written three books using it. However, it would have been unfair to have compared it with Quill bearing in mind the QL's additional memory and superior keyboard. The home micro is now in a different league, which will make the selling of them all the more a specialist job.

Malcolm Davison  
Burgess Hill  
West Sussex

## Reply to QL comments

I would like to reply to A Cunningham's letter (PCW, 7 June) with reference to his comments on the QL.

1) Superbasic is designed so

that a user can advance from simple programs to more complex ones without the need for learning another language. The basic itself is fairly standard with a lot of extra features such as procedures.

2) Yes, I agree — poor show from Sinclair; still he is getting better.

3) I would rather have microdrives than a cassette port, although Sony mini discs would be even better.

4) If you prefer CPM and Wordstar then I suggest you go and find an out of date machine like the Apple, pay about £1,000 for it and then wish you had something more flexible and powerful.

Finally, a comment about MSX. Now is not the time to try and standardise things. The market has changed radically in the last two years and it is sure to continue like this for a while. Two years ago, a 16K colour computer was rare, now you can buy a 128K colour computer for a similar price. How can a system like MSX expect to take full advantage of computers which are likely to be available in the near future.

Gary Watson  
Plessey Defence Systems  
Christchurch

## Games release

I have had a CBM64 now for about four months and, quite honestly, I am fed up.

Not with my computer by any means, I still think it is the best machine in my price range. But it aggravates me the way games are always released

on the Spectrum months before companies bother to produce them for the CBM64. Some software houses are good at making different versions available — especially Ocean. But I have still to see games like *Atic Atac* and *Jetset Willy* appear on the 64 even though, with the CBM64's superior graphics and sound, I dare say they could make a better job of the games!

Justin Kerswell  
50 Oakfields  
Broad Acres  
Guildford

## A poor education

Graham Stock probably does not realise what he is arguing in his letter excusing "home piracy." Since when has it been all right to steal as long as (a) you claim you can't afford the thing, and (b) you can get away with it? Mr Stock should remember that the authors and publishers of good programs put in a great many hours of work to provide us with first-class material and spend a lot of money getting it to us. Many of the pirates are still at school and to suggest to them that it's all right to enjoy other people's work without paying for it is pretty poor education.

W H Stevenson  
11 Johnston Terrace  
Edinburgh

## Interesting, witty?

Whenever Boris Allan gets his turn on the Ziggurat page, one can guarantee that he will have something interesting, witty, or provocative to say — and Vol 3 No 25 of PCW proved no exception. Thank heavens that someone has actually noticed how unsatisfactory reviews can be.

It was therefore with no little amusement that I turned to the New Release of Mosaic's *Width of the World* adventure in the same issue. I knew nothing about the program beforehand — and was almost as ignorant afterwards! We were told that the program was not good enough. Why? Because it has simple verb-noun entry, very simple graphics, and is

written in Basic.

Now the curious thing is that one of the reviewer's yardsticks in this matter, along with *The Hobbit* and *Valhalla*, was *Knight's Quest*. Very sensible — *Knight's Quest* is a very fine adventure indeed. But it's a funny thing, you know — *Knight's Quest* has very simple (very slow) graphics, is written in Basic, and accepts only simple commands...

What makes *Knight's Quest* a fine program is the ingenuity and complexity of its plot, and the fertile imagination of its author. And in this regard, we, your readers, are no wiser about the really relevant facts concerning Mosaic's program than we were before.

This is the case in 90% of reviews in any magazine, particularly where adventure programs are concerned. Tony Bridge is really the only man worth listening to...

## Bug discovery

As well as the bug which Alan Turnbull (PCW Vol 3, No 22) found in the ZX Microdrive Rom, I have discovered (to my misfortune) two other bugs.

If you attempt to save a program with less than about 500 bytes remaining (the Microdrive uses up to about 550 as soon as the Interface Rom is plugged in for Load/Save/Verify) the Microdrive will start up and will not save the program (or even stop) until you pull the plug and reset. The problem is caused by the designers of the Rom overlooking the stack. The unit tries to save, even if there is not enough memory to do so.

The second bug is that if you try to erase a filename which does not exist, it will start up for about a minute and then report with 0 OK, 0:1. There also appears to be an oddity when you try to save a program with ten Line 0 Rem statements in. It will spend about 15 seconds filling up the cartridge with rubbish and report with a 'Microdrive Full' error!

N Foster  
Hinckley

"We're waiting to see Sir Clive but there seems to be some delay."

# COMMODORE 64 BASIC BEGINNER'S PACK . . .

A subtle blend of software and book to enliven the duller of Commodore 64's.

## The Software

**Honey Aid 1:** a complete utility that adds 28 new commands to Commodore 64 BASIC, in three groups.

- **Toolkit:** these commands help you create your own programs in BASIC. One day you'll wonder how you did without them.
- **Graphics:** use colour and hires graphics with ease - decorate and colour your 64.
- **Synthesizer:** build all the SID chip's features into your program. No need for POKEs, just use Honey Aid's BASIC-like commands.

## In addition - on the tape:

- **Char Gen:** a full-featured character generator that will redefine any or all of the standard 64 characters, even the ones used by Char Gen - while it runs.
- **Sprite Gen:** a sprite generator to define sprites - normal or enlarged, single colour or multicolour. Displays the sprite as it's defined. Transforms the design into DATA statements.
- **Composatune:** explores the SID chip. Allows you to type in a tune and to store this in DATA statements. Later, you can recover this to re-create the tune. Buildasound: lets you explore all the features of SID and hear them in action.
- **Guesser:** a unique computer-aided-simulation (CAL) of a number-guessing game. Demonstrates how each statement works and shows it all in action.
- **Hangman:** a full hangman game to provide entertainment and education.
- **Breakout:** a video ball game, break down the wall to score.
- **Blockade:** a two-player game, trap your opponent, they're trapped - you win.
- **Balltrap:** get the ball in the net to win - frustrating but fun!
- plus, plus . . .

## The Book

A 360-page text that guides you step-by-step, through the 64's BASIC - learning as you go! Each piece of software on the tape (and many more) is developed stage-by-stage. Once the fundamentals of BASIC are mastered, the specialities of the 64 are introduced.

From a simple number-guessing game via a reaction-tester, a hangman game and three video games to character and sprite generators, the projects increase gradually in complexity. This unique approach ensures that you learn - and that learning is fun!

**It loads Spectrums four times faster than an ordinary cassette player, uses standard cassette software, and has improved loading reliability.**

The new Sprint from Challenge Research will load and save Spectrum programs at four times the speed of conventional cassette players, this even applies to standard program and games cassette software that has been pre-recorded at normal speed. All this plus improved loading reliability is available for just £64.95 inclusive of post, packing, VAT and a 12 month guarantee. The Sprint is dedicated to both the 16K and 48K Spectrum and provides an innovative but inexpensive new concept in cassette tape storage.

- Retains the standard Spectrum commands and format.
- Advanced digital circuitry and signal processing improves loading reliability and eliminates volume setting.
- Simply plugs into the Spectrum port — no interface or external power unit required, it even has its own expansion slot so that you can still use other peripherals at the same time.
- A full 48K program will load or save in 75 seconds rather than five minutes with a conventional cassette recorder.

Spectrum and be the envy of your friends. If you have Visa or Access cards you may phone your order to ensure faster delivery by calling Potters Bar (0707) 44063, or post the coupon below. Please allow 28 days for delivery. If you are not delighted with your Challenge Sprint simply return it within 7 days and we will refund your money in full.

# Reptile's revenge

A version of the popular *Snake* game written by Ian Logan for the QL

The following listings quite nicely illustrate both the power of *Superbasic* and a few of its limitations. Of particular usefulness are:

- the ability to define Windows and to print into them.
- the definition of procedures.
- the *Repeat/End Repeat* structure.
- the *For/End For* structure.
- the *If, Then, Else, End If* structure.
- the ability to reserve memory using *Respr*.

whereas one does miss:

- the inability to define graphic characters with any ease.
- the presence of only the single sound 'voice' (but the extended *Beep* command helps a little).

## Program Notes

The program has been written without the benefit of instructive *Remark* statements, so the following notes may be helpful.

Line 120 *Mode 8* allows the use of green, yellow, magenta and cyan.

Line 120-130 output windows for streams 3 & 4 are defined.

Line 150-190 the main loop of the program; if the 'playing' ends then 'start' again.

Line 210-390 prepare the initial display. The playing area has a height, *h*, of 16 characters and a width, *w*, of 33 characters.

Line 440-470 the score *sc*, is set to zero; the play-on flag, *f*, is cleared; the number of targets, *n*, is set to 100.

Line 480-560 The positions for the targets are selected at random. The appropriate locations in the reserved memory are marked in use, *f*, and the targets are displayed.

Line 570-630 A snake of size one segment is created at Line 8 and Row 16. This position is stored in a position string, *p*.

Line 650-1000 The snake moving procedure. The various steps are 1) return if the *s* key is being pressed. 2) Alter the direction parameters (*lc*, *rc* and *d*) depending on which cursor key is being pressed. 3) Return if the snake has reached the edge of the playing area. 4) Print-over the head of the snake with either a space character or a 'crosshatch' character depending on whether the snake has one or more segments. 5) Find the value, *v*, of the location where the head of the snake

is now. 6) If the location is 'free' (*v*=0) then 'shorten' the snake. 7) If the target has been hit then add 1 to the score and make a 'beep' (really a 'munch').

Line 1020-1090 The procedure *Play* is defined. This is the main control procedure and 'playing' continues until the 'play-on' flag, *f*, becomes set.

Line 1110-1250 This procedure *Ended* is defined. Here the suitable messages are selected and the program waits for the user to press either the *Enter* or the *d* keys; if no key is pressed within 20 seconds the demonstration procedure is called.

Line 1280-1320 The controller procedure for the demonstration mode.

Line 1340-1460 The *Demo* procedure is defined. This procedure contains a series of calls to the snake-moving procedure so that the snake 'sweeps' backwards and forwards across the screen until all the 'targets' are hit. Try writing your own *Demo* procedure! It is not too difficult to make it appear that the snake is intelligent and much better at getting all the 'targets' than any human player.

## Note

On some early machines the *At* command parameters *x* and *y* are defined *y* and *x*. In this case the parameters *b* and *c*, *l* and *r* and *l* and *r* will have to be transposed.

## What the census saw

*Christina Erskine talks to historian John Palmer who is busy putting the Domesday Book onto a computer.*

A curious anomaly exists ■ Hull University. The history students are allocated four times as much memory space on the university's mainframe computer as the computing scientists.

This state of affairs is due entirely to one course offered ■ final year historians, study of the Domesday Book, 'the census' of landowners and details of property commissioned by William the Conqueror in 1066, and completed twenty years later.

The text of the Domesday Book — between two and three million words — takes up 50,000K on the computer, and offers students the chance to study the book in an original way, bringing to light previously undiscovered facts about life in England after the Norman conquest.

The idea of putting the book onto the computer was the brainchild of Dr John Palmer, senior lecturer in History at Hull, who began work on it as a teaching package over five years ago.

"Final year students at Hull ■ spend half their time studying ■ special subject. Only original sources may be used, making it very close to pure research," explained John.

"I had to choose an option to add to the list for that course and I was interested in the potential of computers, because I felt there were so many things one could do with a computer that could be well-nigh impossible without.

"The Domesday book was something of a departure for me — I specialise in Mediaeval history — but it was an obvious one for study at Hull; we actually have two copies of the version republished in 1783 in the library."

### "only original sources may be used..."

"I was surprised to find that the Domesday book had not previously been computerised, and it dawned on me that if the course was going to be offered at all I was going to have to do it myself, even though I knew absolutely nothing about computers at the time."

"Luckily, I managed to interest George Slater, one of the university programmers, in the project, and he took over the technical side."

The first stage of the project was to type all the text from the volumes on to the computer — a formidable task in itself, and not one that John, with full-time teaching and research commitments could undertake himself.

"I found I was ineligible for a research grant, but rather deviously, I managed to obtain four typists from the Government's

manpower team."

The typing in stage took about 15 months ■ complete. The Domesday book ■ written in Latin shorthand, using abbreviation symbols which cannot be directly represented on the keyboard, so John had ■ devise a code to signify these marks.

But the biggest headache was undoubtedly checking for typing errors — spelling was not standardised when the Book was written, and many different versions of the same word can appear in the manuscript.

The next stage was to produce a database package to enable specific information to be retrieved from the text.

### "... a vast amount of reading ..."

When William the Conqueror commissioned the book, he was primarily interested in the relative wealth of his landowners, rather than a sociological survey of the country. However, by calculating the facts and figures from each section, one can gain an accurate picture of, for example, population, agriculture, social organisation or wealth distribution.

In the book, while each county is treated as a separate section, the county is then sub-divided according to the ownership of the land, rather than by village.

"Each 'manor' that a tenant-in-chief held is mentioned separately," said John. "But a village can consist of more than one manor. In Bedfordshire, for example, there were 377 manors but 143 villages."

"Of course, it ■ quite possible to study the size and status of each community, but it involves a vast amount of reading and

laborious calculations, which my students would neither have the time or patience for. But a database program on the computer can compare and calculate all the statistics in ■ matter of seconds." If you like, it acts as a very accurate cross-index, and mathematician."

Because of the volume of text, the database programs themselves apply to each county separately.

From working on the database, John could see further potential for the Domesday project.

"What I would like to do now is to make a computer version of the English translation, and transfer each county separately onto floppy disc. The discs and a sub-set of the applications package could then be sold, hired or lent to schools together with a floppy disc for their particular county."

"So far we have put Bedfordshire onto a ■ inch floppy disc for use with the BBC B and we have been able to use the graphics facility on the BBC to reproduce the original shorthand marks."

"If I can get some kind of a grant for a full-time programmer, there's no reason why all the counties shouldn't be on floppy disc for the BBC and available in the next two years. 1986, curiously enough, will be the Domesday book's 900th anniversary."

But John is not settling 1986 as a final date to have finished with the Domesday book and the computer.

### "... something of a cult following"

"I've become so interested in it now that I can see myself continuing to research it for many years to come."

"Certainly the biography of Richard II I was planning on writing five years ago seems to have gone to the wall."

In the four years that the Domesday book option has been available ■ Hull students as a special course, it has acquired something of a cult following.

"It's certainly something different", agreed John. "As far as I know, we're the only history department that uses a computer for anything other than statistics, and this is, of course, the only computerised version of the Domesday book."

"I wouldn't say it's a wildly popular option, because it's a stiff course. The students have to write a 10,000 word dissertation on an aspect of the book that preferably hasn't been studied before. But using the computer means that the number of aspects is almost infinite."

"The students on the course frequently get very wrapped up ■ it — I've heard frustrated tutors in the history department complain of hearing so much from the students about their Domesday book dissertations. But in the four years that the course has run, there's always been at least one first class degree from someone who chose the Domesday book as a final year option."

## Bigger and hungrier

**Program** *Ossie Micro BBC B*  
**Price** £6.95 **Supplier** Peaksoft,  
7 Hawthorn Crescent, Burton-  
on-Trent.

After peculiar penguins and unlikely invading firebirds here comes Peaksoft with *Ossie*, based on the natural problems an Osprey has keeping its chicks fed and fighting off poachers.

The program draws a lake in

the mountains with a nest on a lone tree. The bird you control has to dive into the lake to catch fish for its chicks. Every now and then it has to swoop on poachers and drive them off.

There's no relaxation — it has to feed the chicks within a strict time-limit. With each new sheet the chicks grow bigger and hungrier and time is shorter. Diving into the lake is a tricky business of co-ordination to catch a fish rather than just get wet.

The graphics are good but *Ossie* does not stand out very clearly (perhaps a deliberate tribute to its natural camouflage). The splash is a realistic sound effect and comes with enough of a delay after each

dive to persuade you that you're a thoughtful naturalist watching from a rocky crag some distance away.

Dave Watterson

## A rare gem

**Program** *The Storyline Micro BBC B* **Price** £7.95 **Supplier** Daco Software, 59 Mackenzie Road, Moseley, Birmingham B11 4EP

Here's a happy exception to the rule that educational programs often become useless at home without a skilled teacher to oversee their use.

With *The Storyline* children aged between 5 and 12 can write short stories of their own in large letters on screen and print them out to a printer.

The program offers a continuous selection of words and you press a key to choose which to incorporate next into the story. It is simplicity itself to operate and well crash-

proofed. The child is gently forced to use adjectives, adverbs and verbs in all the right places. Learning new words involves first recognising them in reading material and then, crucially, being able to use them in your own writing. *The Storyline* is that rare gem, a learning aid which helps the second process.

Parents are encouraged to modify the data lines to introduce new vocabulary — guided by straightforward, brief but detailed and helpful notes. Aunts and uncles should be ready to receive lots of simple but fun stories from excited youngsters who will really enjoy this unusual program.

Simon Wilson

## Elementary!

**Program** *Dr Watson Series — BBC Assembly Language Course* **Price** £12.50 **Micro BBC** **Supplier** Honeyfold Software Ltd, Standfast House, Bath Place, Barnet, London.

As with any language — French, German, BASIC etc — there's no instant short cut to learning Assembly Language (or Assembler as it's often known). Good teachers, however, do make the task much easier. Tom de Havas and Peter Holmes are very good teachers. A couple of years ago the 'Doctor Watson' series of books introduced Assembler tutors for the Pet and the Vic. Now they have revised and rewritten those for the BBC.

What you buy is essentially 156 pages of first-rate lessons backed up by 47 pages of appendices, a glossary, index and a cassette. The lessons are by far the best I've seen. At first they use ordinary decimal

numbers, make comparisons with Basic and use very short programs to demonstrate each new concept. As you learn you can see the purpose of each command. Right from the start you begin to realise how you could use these instructions for a practical purpose in your own programs.

Very sensible use is made of boxes round new terms and their meaning. Simple flowcharts and diagrams are used where they help.

The cassette with the pack is probably not essential to your learning. It offers a full disassembler to allow study of other people's programs, a couple of exercises to help you master the rote learning part of binary and hexadecimal numbering systems.

The authors say they tried the book out on a novice who soon let them know where more explanation was needed. The result is excellent, much better than most other introductory books and articles on the subject and very highly recommended.

Dave Watterson

## Black bugs

**Program** *Screwball* **Price** £0.00 **Micro BBC** **32K** **Supplier** MRM Software, 17 Cross Coates Road, Grimsby, South Humberside.

*Screwball* is MRM's latest addition in the *Q-Man*, *Q-Man's Brother* family of games. Whilst the concept behind these games is one of the more entertaining, and no doubt successful, to date, I imagine that it can't be long before the market for such similar offerings is saturated as the demand for something different grows.

That said, however, I find *Screwball* the most enjoyable and interesting of the trio, not entirely surprising considering that it is a development and direct descendant of the other two.

As with the previous variants, the object of the game is to move the *Screwball* character about the screen, changing the colour of squares it lands on

as it goes, and avoiding the Black Bugs which are in hot pursuit.

*Screwball* is slightly more complex in that as the game progresses, the screens become more complicated and *Screwball*'s movements are restricted as sections disappear. Similarly, holes which the *Screwball* frantically drills in order to destroy the Black Bugs can also trap him and lead to his own downfall if he is not careful.

Typically, MRM's use of graphics and sound are both bold and pleasing but originality is somewhat lacking in this offering. You can add one to the 'star rating' if you haven't played a similar game before.

Simon Wilson

## Instant squares

**Program** *Electro Art Micro*  
**Electron Price** £0.00 **Supplier**  
Quicksilver, Palmerston Park  
House, 13 Palmerston Road,  
Southampton.

Any computer program which allows you to draw or paint pictures on screen must be easy to use.

With Quicksilver's *Electro-Art* there are so many facilities or effects available that I had to keep referring to the explanatory booklet as I attempted to draw even a simple picture.

After loading you are asked for the colour of your background and then the colour of your first ink (all sixteen colours of Mode 2). After this, colour changes are very simple, but the string of options available is daunting. You can choose to move invisibly, draw instant squares, rectangles, four different triangles, horizontal or vertical lines, fill in

your own shapes, draw/paint trace/abstract circles of any size or draw lines in any direction.

Having begun a picture or finished a screen you need to be able to save it to either improve upon at a later date. With *Electro-Art* couldn't be easier. However, in order to re-load a picture the whole program must first be loaded first. I tried the three free example pictures which are supplied and whilst I found them fascinating — way beyond my capabilities — I was a little impatient at the slowness, not only to load the initial program but also the long wait for the picture to build up on the screen.

*Electro-Art* is a fascinating program for anyone who wants to try drawing using a computer. It offers every facility to allow you to do this — all that it doesn't provide is the artistic ability that must come from you.

Fred Short

## Profit and loss

**Program** *The Chocolate Factory* **Price** £6.95 **Micro** *Dragon*  
**Supplier** Minits, Strand  
House, Great West Road,  
Brentford, Middlesex

This is a business simulation game for two to six players which should appeal to all those who enjoy trying to outfox their competitors, and has arguably, the added advantage of teaching some basic business finance painlessly. It is aimed at adults and older children. The object of the game is to increase the net worth of your company and to finish ahead of the competition. The game is played in business periods and the number of periods to be played, and thus the length of the game is decided at the start.

Each player starts with a factory with a known capacity and a sum of money. There are a series of decisions to be made within each period. They include number of staff, whether to include extra vans or capacity, how much to manufacture, and the selling price. There is information as to the effect these decisions

may have and also a market prediction. Once all players have made their selections and time presses, the results of the simulated trade appear on the screen for each player, in the form of profit and loss account, balance sheet and some comments on the reasons for the results (eg. "you did not have enough vans"). To make the game more difficult various extras can be added, including strikes, heat waves and high inflation.

The only problem with the screen display is that the players' business decisions appear on the screen as they are input. This means that some means has to be devised to keep that data from the other competitors.

For those who like to play strategic games where the object is to out think others and take calculated risks, this has enough variety to hold the interest for quite a while. Since it depends on knowing how the other business will react and outsmarting him (or her), having different options, differing numbers of periods, or of course different opponents keeps the challenge going.

Derrick Trueman

## Brick lane

**Program** *Eric and the Floaters*  
**Micro** 16/48K **Spectrum Price**  
£5.95 **Supplier** Sinclair Re-  
search, Standhope Road,  
Camberley, Surrey.

It is difficult to know exactly what to say about a game when you have the feeling that, despite several enjoyable hours, you still haven't played it properly. The problem is that Sinclair, in their wisdom, have made sure that *Eric and the Floaters* is only compatible with their own interface. To be blunt, this is selfish and shortsighted. But now in the game

Armed only with time bombs, Eric must defeat the lane's pulsating guardians, the Floaters, collecting a time bonus, and moving to the next screen, where a greater number of Floaters awaits. The time bombs are short-fused, so Eric must ensure that he gets well out of the way of his own bombs. These explosions will also break down the maze.

Although there is only one skill level, the game has twenty stages which will maintain the challenge, no matter how good you get. However, with an uncomfortable choice of control keys, no redefine facility, I didn't do too well. It seems a shame that Sinclair has thus restricted what is otherwise a

Hidden below the remains of a ruined civilisation, Eric has chanced upon the dangerous mazes of the Brick Lanes.

perfectly good game.

Gordon Sneddon

## Balanced learning

**Program** *Science I Micro* **Electron**  
**Price** £0.00 **Supplier**  
Shards Software, Suite G,  
Rovercraft House, 15 Luton  
Road, Barking, Essex

*Shard's Science* for the Electron offers aspects of basic science for 11 to 16 year olds, covering balances, meters and light.

Shard describes its program as fun-to-learn and, if using a computer to learn physical concepts is fun, then I would tend to agree. However, I think any attempt to translate the physical world (especially of science) into what is fundamentally an animated text book, runs the risk of adverse criticism. To me, science is to do with apparatus and learning

by experimentation with the necessary tools/equipment necessary to prove/disprove a theory.

Having said that, I must now appear to contradict myself and state that this collection of programs would be very valuable to a science student who either hasn't grasped the concept during his lesson or who needs very good, well thought out animated revision which he can use alongside the actual apparatus itself.

Each program offers various degrees of complexity both in example and questions about the concept being explained. So for the student who needs to grasp the fundamentals of balances, meters or lenses, this series of programs by Shards is a must.

Fred Short

## Lapped

**Program Stock Car Price** £7.95  
**Micro BBC B Supplier** Micro Power, 88a Regent Street, Chapel Allerton, Leeds LS7 4PE

This car race game for the BBC is of the type where you are presented with an aerial view of the race circuit, one of the six different circuits which can be selected in *Stock Car*, as opposed to the alternative 'drivers' level view.

The options include choosing the degree of skidding

(0-99%), an interesting enhancement to a relatively standard game. In addition, the player(s) can select whether or not oil patches are present on the track and set the game in the number of laps.

## First impressions

**Program Photon Disassembler Micro Spectrum 48K Price** £10.85 **Supplier** Eigen Software.

There are now getting on for a dozen assembler/disassembler programs being sold for the Spectrum. Three, in particular, are especially good — *Devpack*, *Zeus* by Sinclair and the *Picturesque* package. I use the latter, and am so pleased with it that any new program needs to be really good to make a favourable impression.

Sorry, Eigen, but *Photon* is not excellent.

First impressions are, in my experience, all-important — making one's mind up about something. In this case, my first view of the program was of a very cheaply packaged cassette, with a text book-like manual. I tediously read this, while loading the program to discover what to do next and the leaflet which makes up the manual was of no help, either.

After experimenting (pres-

One point in the game's favour is that it does provide one of the relatively limited number of two-player games available; its addition to your software collection may prevent 'non-participant' observers becoming totally bored whilst you (the expert) demonstrate your latest purchase.

As well as the players cars, the computer controls two yellow cars (three in the case of a one player game). Players may use either keyboard or joysticks to steer the car, and move up and down through four games, skill at which is essential in order to maximise acceleration (especially after a crash) and to outmanoeuvre the rivals.

The principal deficiency of the game, in my opinion, lies in its relatively unsophisticated graphics content. Better use of sound could have been made, perhaps motor and gear-change noises as opposed to the game's rather unimaginative arcade jingles.

Simon Wilson

sing every conceivable combination of keys until something happens!) I found out that pressing the **■** key tells the computer to expect a hex number. The going was extremely tough but I eventually worked out what to do and after giving it some machine code to disassemble, I thought (hoped?) that I had passed the worst.

But this was not to be. It seems to me that this disassembler does not actually disassemble. It made no attempt to digest my code, anyway. It is of course possible that I was doing something wrong — I certainly don't rule out the possibility. But I followed the instructions, and so I cannot see any customers faring any better than I did.

As there are already three disassemblers on sale which I like, can and do use and all for rather less than the £10.85 asking price for this, I feel compelled to advise you to save your money, and go for the cheaper packages already on sale, which appear to be infinitely better value.

David Lester

## Nailbiting tension

**Program Orc Attack Micro Atari Price** £9.95 **Supplier** Thorn-EMI retail.

Thorn-EMI entered the games software scene some months ago with a wide selection of Atari programs. They featured excellent packaging, but with prices up to £30.00, represented appalling value and consequently didn't sell too well. Some of them have now been repackaged and repriced under a new label — Creative Sparks.

*Orc Attack* is a good arcade game, and comes as a cartridge. The game mechanics

are pretty simple — you control a little Norman-like soldier who has to defend the Castle battlements from the attacks of waves of mean Orcs.

Being Norman, he has the wisdom (sorry, about that!) to have a never-ending supply of various weapons to hand. Rocks, swords and boiling oil may all be pressed into service as the little Orcs rush about with scaling ladders. The game has the right amount of nailbiting tension and mounting complexity. Very addictive, with good sound and graphic burnings in the oil, or your head tumbling over the battlements!

Tony Bridge

## Queen takes pawn

**Program Death Chess 5000 Micro 48K Spectrum Price** £6.95 **Supplier** Artic, Main Street, Brandesburton, Driffield, Yorks YO25 8RL.

Karpov would never believe **■**. Queen takes Pawn never meant so much. Artic here attempted with *Death Chess* to extend the bounds of traditional chess by making each capture into a

dodge falling barrels. And so on and so forth. These screens are graphically interesting and adept, though extremely low on entertainment value.

And what happens when you get back to the board? Well, in finding that you have lost your Queen to the Spectrum's Pawn which can happen all too easily and often, you realise that to win you must dispense with every piece of chess strategy you ever learnt. For while the computer is still playing chess, logic has left. To win? Just

game of arcade fun and wizardry. Well, I did say attempt.

When you decide that P x **■** looks like a good move the screen display fades (quite nicely) into an alien terrain where your battle tank must run the gauntlet of not very fierce helicopter attacks to reach a distant city. This screen is almost impossible to lose. B x B — escape from a maze filled with vagrant skulls. R x R —

keep advancing pawns, one is bound to get to the King.

Quite simply, the 'chess' is not chess, and if you want good and varied arcade action, then there are better places to find it than here. The program is technically accomplished and impressive, but the effect is rather dull.

Gordon Sneddon

## COMMODORE 64

ARE YOU STILL LOADING YOUR TAPES AT STANDARD RATE? TURBOCHARGE YOUR PROGRAMS WITH

### HYPERSAVE — 64

ONCE HYPERSAVED, YOUR PROGRAMS (BASIC OR MACHINE CODE) WILL INDEPENDENTLY RELOAD AT A RATE FASTER THAN THE COMMODORE DISK DRIVE! EACH HYPERSAVED PROGRAM IS FULLY SELF-CONTAINED, AND WILL LOAD INDEPENDENTLY OF HYPERSAVE. NO ADDITIONAL HARDWARE OR SOFTWARE REQUIRED.

- ★ EIGHT ADDITIONAL BASIC COMMANDS
- ★ OPTIONAL AUTORUN FACILITY
- ★ SAVE/VERIFY UP TO 48k CONTINUOUS RAM

HYPERSAVE IS THE VERSATILE FAST LOADER FOR THE COMMODORE 64, WITH SPECIAL FEATURES WHICH NO COMPETITOR CAN BOAST. FULL INSTRUCTIONS ARE PROVIDED TO CONVERT YOUR EXISTING PROGRAMS. IT WORKS WITH YOUR LONGEST PROGRAMS, AND A RANGE OF PROGRAM TYPES ARE PROVIDED FOR THIS AN ESSENTIAL UTILITY FOR ALL TAPE USERS. CASSETTE 7.50p. PLUS! FREE WITH EVERY ORDER. SECRETS! # Assimilate. And Stimulate.

From Sunshine, a book all about simulation techniques on Sinclair's new QL, written with the unique benefit of actual QL experience. Many entertaining, intriguing chapters explain how you can get your QL to output what you need, to help your hobby, your business — or your curiosity. Inside, you'll find how to develop the ability to fully analyse problems and confidently develop your own simulations. And you'll be able to stretch the potential of your new QL to the limits.

Using our modelling techniques you can create an economic model, or a flight simulator. You can engineer a more efficient engine, or manage a project better. All on your QL, with the help of this vital new book, *An Introduction to Simulation Techniques on the Sinclair QL*.

Order today, using the coupon or from your local bookshop or computer dealer.

Please send me the Introduction to Simulation Techniques on the Sinclair QL at £6.95 ISBN 0 946408 45 9

# Key to the puzzle

Alan McDonald begins a five part series of articles showing how to write machine-code adventure games

Over the next few issues I shall try to explain how to write a machine-code adventure game for the ZX-Spectrum. Owners of other Z80-based computers may also find the articles of use, in their adventure writing.

The best way to explain how to write an adventure game is to actually design and code one. If you have some knowledge of Z80 machine code then it will be useful.

We only have five weeks, so it will have to be a small one, but the principles are true for a full-blown adventure.

One of the most famous adventures is *Colossal Cave*. Our 'mini' PCW adventure will be based around the first few puzzles found in the adventure.

You start off near a small brick building. Once inside there is a set of rusty keys, a torch, a small pool of water and an empty bottle. The only thing of use in our adventure will be the keys, although you can still fill the bottle and turn on the torch. Eventually you make your way to a grating which is locked — obviously you will unlock it with the keys and then go through. Once inside the caves, you wander around until you find a small wickerwork cage and a black rod. Further on, you come across a singing bird. You must try to catch it, however something is scaring it off. The black rod. You drop the rod and catch the bird. You go deeper into the caves where you find the famous green snake. You release the bird from the cage. The bird kills the snake before flying off. The short adventure ends here, but of course your own adventure can be carried on more or less for as long as you wish.

Here is a map to clarify the layout.

just a special type of database and broadly speaking there are three types of data which need to be stored.

- Locations — a description of each location plus the direction data — exits and so on.
- Objects — including their location and movement.
- Messages — what the adventure tells you.

## Locations

Each location allows the player to move to and from it, eg:

Going east from outside the building takes you inside it. Going south, however, takes you to the valley. Notice how each location has a unique number attached to it. The following is a list of all the locations and their numbers:

## Number Location

- 1 You are standing before a huge brick building.
- 2 You are inside the brick building.
- 3 You are in a steep sided valley.
- 4 You are beside a fast flowing stream. The

The map shows the positions of the objects in the adventure. Any adventure is

water flows into a 2-inch channel.

- 5 You are in a 20 foot depression

- 7 You are in a finely cobbled pathway, leading E-W.
- 8 You are in the Bird Chamber.
- 9 You are in The Hallway of the Mountain King.
- 10 You are on a dark rocky staircase.
- 11 You are in a small chamber.
- 12 You are in an open forest.

Therefore location 7 is e-w canyon. If we go east from 1 we end up in 2. If we go south from 1 we end up in 3. And so on.

In our adventure there are six possible directions: north, south, east, west, up and down. The computer must have 6 bytes of data, to tell if it is possible to move in a given direction. And if movement is possible then it must know where the player will end up. The 6 bytes of data for Location 1 would be 0,3,2,0,0,0 which tells the computer:

North = 0 Can't go north,  
South = 3 End up in the valley (Location 3)  
East = 2 End up inside the building (Location 2)  
West = 0 Can't go west.  
Up = 0 Can't go up.  
Down = 0 Can't go down.

This information is stored in memory using the following format: Location, Separator, n,s,e,w,u,d.

The separator is '255' so that the computer knows when it has reached the end of the description.

In Assembler format, Location 1 would be represented by:

DEFB "You are standing before a huge brick building", 225,0,3,2,0,0

The first part of the Location database must start as ...

LOCATE DEFB 255,0,0,0,0,0  
label separator 6 null bytes (n,s,e,w,u,d)

Take a look at the Assembler listing to see the location database for yourself.

## Objects

There are 14 objects shown in the following table.

Number	Object	LOC	EXE
1	Rusty set of keys	2	0
2	Torch which is on	2	3
3	Torch which is off	2	0
4	Empty bottle	2	0
5	Bottle of water	2	3
6	Greenish pool of water	2	2
7	Locked grating	5	2
8	Open grating	5	3
9	Small wicker-work basket	6	0
10	Black rod	7	0
11	Small singing bird	8	2
12	Small bird in wickerwork cage	8	3
13	Vicious green snake	9	2
14	Dead snake	9	3

Notice how two numbers precede each object. The first tells us what location the object is at; eg, the snake is at location 9, and the second tells us if the object does or doesn't exist. The existence codes are as follows: 0 = Object is visible and can be picked up; 1 = the player is carrying the object; 2 = object is visible but can't be taken; 3 = the object does not yet exist, or no longer exists; 4 = the object is being worn. (Not applicable in this adventure).

As an example, in the PCW adventure

there is a torch. Two objects are used to represent it — a torch which is on and a torch which is off. Since they both can't exist at the same time one of them is always at Existence 3.

The object data is stored as follows.

```
OBJECT DEFB 255 ; separator
DEFM "object".
DEFB 255 ; separator
DEFM "object".
```

and so on.

Take another look at the Assembler listing, to see how all the objects are stored. The existence and location data of each object is stored separately.

### Messages

The message table holds a list of words used in the adventure, eg *Ok.., I don't understand. You turn the torch off* are all messages. They are stored in the same way as the objects.

```
MTABLE DEFB 255 ; separator
DEFM "message".
```

DEFB 255 ; separator.

DEFM "message".

Again refer to the assembler listing.

Like any other program there are variables. If you study the assembler listing carefully you will find a short list of them. The only variables which are important to use at the moment are these:

```
X DEFB 1 ; location the player is currently at.
NOR DEFB 0
TSOU DEFB 0
EAS DEFB 0
WES DEFB 0
UP DEFB 0
DOW DEFB 0 ; number of objects being carried
INV DEFB 0 ; locations of objects 14 objects
; 14 bytes
LOC DEFB 14 ; existence of objects
```

When the program is first run the variables will need to be set up. When a new game is started all of the variables have changed and, therefore we will need to store a permanent copy of the variables somewhere else. Each time the program is

started they can then be copied into their correct positions.

```
BUFF DEFB 1,0,0,0,0,0,0,0 ; X to INV
DEFB 2,2,2,2,2,5,5,6,7,8,8,9,9 ; LOC
DEFB 0,3,0,0,3,2,2,3,0,0,2,3,3 ; EXE
; length of buffer = 36
```

As mentioned earlier the location and existence data for each object is stored separately to make accessing the data easier. Imagine that we want to find out the existence of Object 13 (vicious green snake). We can make HL point to it then store its value into the A register, ie:

```
LD HL, EXE+12 ; HL - the 13th object.
LDA, (HL) ; store it into A
```

The A register now holds the existence of the green snake. You may be wondering why it's LD HL, EXE+12 and not 13. This is because we start from 0-EXE+0 = the keys, EXE+1 = the torch which is off, and EXE+12 = the green snake.

This then is the rough form of the PCW adventure. Next week we'll deal with printing information to the screen.

```

**NEW**  
UNEXPANDED  
**VIC 20**  
**GAMES DESIGNER**

## MAKE GREAT GAMES....

Create your own amazing games with  
Galactics unique **GAMES DESIGNER** cassette  
for the unexpanded VIC 20, only **£9.95**  
including post and packing

ONLY  
**£9.95**

★ No Programming experience Needed ★

With the **GAMES DESIGNER** you make your own machine code games.  
You can design all the Graphics, Screen layouts, Theme tunes, Explosions,  
Sound effects, Player speed, Alien speed, Skill level, Personalised game  
credits, Scoring values, Keys used, Number of lives, Intelligence of aliens,  
— what's more no programming experience needed.

Also includes 3 sample games:-  
**KANGA, ZYON and KRAZY MAZE.**

NOW AVAILABLE FROM ALL LEADING BRANCHES OF

# Galactic Software

UNIT 7, LARCHFIELD ESTATE,  
DOWLISH FORD, ILMINSTER

SOMERSET TA19 0PF  
TEL: (04605) 5161

**MAKE GREAT GAMES**  
★ No programming experience needed  
★ Full colour Hi-Res Graphics  
★ Make your own sound effects  
★ Joystick or Keyboard control

**ALL IN MACHINE CODE**  
★ Variable degree of difficulty  
★ Make your own Monsters, Moonscapes, Space Ships, Aliens, Kangaroos or Asteroids  
★ Create your very own Games

## One file at a time

Malcolm Bryant demonstrates a file copy program for the QL

This program will copy the entire contents of one microdrive cartridge onto another. The *Clone* programs supplied with the QL only copy the Psion software cartridges and are not general-purpose utilities.

The QL manuals specifically recommend that microdrive cartridges are backed-up frequently. This file copy program can

prevent the tedious business of typing in a separate Copy command for each file on the cartridge. The user has the option of copying the whole cartridge in one operation, or being prompted by the program for one file at a time.

The file copy program works by sending a directory listing to a special temporary file on the 'destination' microdrive. This file is

subsequently read back and the information is used for the copying process. Finally, the temporary file is then deleted and the contents of the 'destination' cartridge are listed on the screen.

Note that the symbols printed in the listing as £ signs should be typed in as hash (#) marks.

```
100 CLS:PRINT"File copy program"
110 PRINT"-----"
120 REPEAT drv
130 INPUT"Which drive are you copying from? ";d:IF d=1 OR d=2 THEN EXIT drv
140 END REPEAT drv
150 s$=d:t$=3-d
160 PRINT"Press ENTER to copy everything or anyother key to copy individual files"
170 e=CODE(INKEY$(-1))
180 PRINT"Accessing microdrive"
190 n$="mdv"&t$&"_temp"
200 OPEN NEW #5,n$
210 DIR #5,"mdv"&s$&"_"
220 CLOSE #5
230 OPEN #5,n$
240 INPUT #5;a$a$;
250 REPEAT loop
260 INPUT #5;a$a$;
270 f=10
280 IF NOT e=10 THEN
290 PRINT"Press ENTER to copy file ";a$a$
300 f=CODE(INKEY$(-1))
310 END IF
320 IF f=10 THEN
330 PRINT"Copying ";a$a$
340 COPY "mdv"&s$&"_"&a$a$ TO "mdv"&t$&"_"&a$a$
350 ELSE
360 PRINT"File ";a$a$;" not copied"
370 END IF
380 IF EOF(#5) THEN
390 CLOSE #5:DELETE n$
400 DIR "mdv"&t$&"_"":EXIT loop
410 END IF
420 END REPEAT loop
```

# Speed limit

Peter Whittaker shows you how to make use of the Dragon Rom's RTS instruction in your own programs

This week we use the same system as last week to create a *List* formatting routine and a *List* speed control.

Assembler 4 (or Basic #2) is a *List* formatting routine. When a *Listed* program line is longer than 75 characters the start of the second, third and fourth lines are indented by four spaces. This means that the line numbers stand out to the left of the

rest of the program, and are subsequently easier to find. To use this on a narrower printer *Poke* the desired line length to location &H7D22. (eg between 10 and 79) Assembler 5 (or Basic #3) is a *LIST* speed control routine. When enabled, the speed of *Listing* is increased by pressing the *Enter* key, and slowed by pressing the *Clear* key. The list can still be paused by pres-

sing the *Shift* and '@' keys together.

## Program Notes

- PSHS X,D,CC The relevant registers are saved. (D=A & B)  
 PULS X,D,CC Restore registers so that the computer will carry on undisturbed  
 JSR #800F Sends character in 'A' register to printer.  
 JSR #8006 Gets character from keyboard into 'A' register  
 JSR 37093 Prints from 'X' register +1 until a 0  
 JMP 33649 Return to Basic  
 Location 1111 Contains the device number (0=screen - 2=printer)  
 Location #9C Contains printer head position  
 To save these routines as machinecode *Savein "routine". 32000, 32130, 359* *Savein "vector". 359, 361, 359* Before reloading *Clear200, 32000*

## Searching completed

Neil Barnes concludes his multi-purpose facility program

This is the last part of a file program designed to make use of Mode 7 BBC graphics.

Procedures	Function
PROCmenu	Displays menu on screen

PROCtitle (TS, H)	Prints title in double height TS — text to be printed H — X position of text
PROCdecide	Decides which option has been chosen
PROCnewfile	Allows a new file to be

PROCgetdata  
PROCadd

PROCverify

PROCdump

PROCsort

PROCsearch

PROClst

PROCend

created  
Inputs data from user  
Allows extra items to be added  
Allows the file to be verified  
Dumps file to printer  
Sorts the file  
Searches for an item in file  
Allows the user to view the file  
Ends the program

```

# ANIROG

House of  
Usher

ICE  
HUNTER

**3 NEW  
TURBO 64  
GAMES  
£6.95  
EACH**

**PETCH**

**Petch**

The wonder penguin is engaged in a desperate search for diamonds hidden in a maze of ice cubes, harassed and chased by his arch-enemies Snowball and Snowbox. His chances of survival are slim. Six levels of skill with two player option.

**House of Usher**

Dare you enter the House of Usher. Behind each locked floor of this nine room mansion a different style of arcade action awaits you.

**Ice Hunter**

Ice hunter needs special ice blocks to build an igloo unaffected by the arctic sun. He has found the source of the blocks in a multi level cavern, but can he outwit the grim inhabitants - the dragons, sea lions and vicious birds and float the blocks down the river to construct his dream home. Six levels and two player option.

**Also available on Disk at £9.95**

# In The Beginning

## The QL QLassics

Sunshine books introduce the QL QLassics, a brand-new range of superbly written, highly informative books that will help you exploit the many and varied possibilities of this eagerly-awaited new micro.

The QL QLassics are in production now for full availability in the summer. And that's definite.

Like all Sunshine books, these are more than mere manuals. Inside you'll discover ways and means to help your business, your hobby – and your future.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer enquiries: 01-437 4343

### Pre-Release QL QLassics Information.

Please send me your free Sunshine QL QLassics brochure, detailing all the books available soon.

# Bits and pieces

Lee Tanner demonstrates a disassembler for CBM 64 with Simons Basic

**D**IS-64 is a disassembler for the Commodore 64 and Simons Basic. There are three commands available:  
**D** To disassemble.  
**P** As for **D** but also output to printer.  
**X** Exit to Basic.  
 The **D** and **P** commands use the same

syntax as the Basic command *List*, eg. **D2048** or **D-200** or **D60000-** or **D**. There must be no spaces between the command letter and the first parameter.

The **DATA** statements must be typed in exactly as shown as the program uses the *Reset* command.

If you do not have a printer you can save a lot of typing by removing all the code relating to the printer operation, ie, remove every occurrence of the code, if **XS="P"** **THEN PRINT#1**, etc, which occurs in lines 22,26,34,37,40,42,43,44,46,48,50 and 52. Also remove the second statement from Line 54 and remove line 260.

## Program notes

10-56 Read code from **DATA** and print  
 80-96 Convert Decimal numbers to Hex.  
 100-280 Input command and verify.  
 170 Error message  
 250 Open a channel to the printer.  
 1000-1260 **DATA** for disassembly.

# Open Forum

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed.

## Clock

on Commodore 64

This program draws an alarm clock and enables you to set both the time and when you want the alarm to go off. The sound facilities on the Commodore 64 enable a

very effective alarm sound to be developed. It wouldn't be difficult to make it ring with any sound you want, eg. Space Invader noises etc.

## Geometric on Spectrum

This program creates a geometric pattern linked to a tune. You press a number from 1 to 5 — the higher the number the more

complex will be the patterns. You can get a copy of the design on a ZX printer if you have one.

```

## Arcade Avenue

### Infinite loop

More letters arrive on the subject of *Jetset Willy* than anything else and understandably so. Now that the prize from Software Projects has been claimed, I can reveal some of the many pokes that people have sent in.

First of all Mike Smith of Edinburgh sends in the inevitable infinite lines poke — insert line 35 *Poke 358990.0*. However, as you will soon find out, you can get yourself into situations where you lose your lives continually in a sort of infinite loop — so press *Caps Shift* and *Break* to reset. This means that it is still not easy to get around.

Mark Ridgeway of Walsall has sent in this short program that does away with all the

monsters and lets you explore the mansion with ease.

```

160 RANDOMISE USP 3792

```

Simon Walker of Redditch sent in *Poke 37874.00* which means that all the objects are magically collected for you as soon as you enter the room! He also says that *Poke 35114.4*

will get rid of the problem about entering the Attic as well as removing some monsters from ten of the rooms (you can find out which for yourselves) and the rope from the Cold room. Unfortunately, the latter does not sound too useful.

Simon then relates a long story about Software Projects failing to include him amongst possible winners, despite several letters and phone calls. Unfortunately, since you confess to having cheated with your pokes I can't really follow this one up for you, Simon. He ends up by suggesting that "Software Projects did not want anyone to win" and this thought is echoed by I Bristow of Chippenham who feels that "the game is impossible without cheating".

Well, having talked to Mat-

thew Smith I am sure nothing so devious was planned — he designed the game to give people a real challenge. To prove it I would like people who finish the game, without cheating, to write in.

Finally this week I have come across a program called *Manic Designer* by P+M Software that allows you to redefine the monsters on the different screens of *Manic Miner*.

Anyone has used this program with great success then please let me know.

Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing tips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## SOPHISTICATED GAMES FOR VIC 20

**VIC CRICKET** Realistic game of skill and luck with all the major rules of cricket correctly interpreted. Full scorecard, printer and game save facilities. Needs 16K expansion. £5.99\*

**LEAGUE SOCCER** League championship game for 2 to 22 teams/players. Automatic fixtures, full action commentaries, match facts. League tables, results check, postponed games, etc. Non league matches also playable - the VIC will even make the cup draw. Printer and game save. Needs 16K expansion. £5.99\*

**WHODUNNIT?** Twelve guests have gathered for drinks at Murder Manor. However one of them has more than drinks on his mind. Thrilling detective game for 1 to 6 players, with genuinely different murder every time. You can even re-name the suspects! Needs 8K expansion. £4.99\*

**TOP OF THE POPS** Money making game about the music business. Make your own records and see them climb the chart. Printer and game save facilities. Needs 8K expansion. £4.99\*

**VIC PARTY** Contains MASTERWORD, A DAY AT THE RACES, GAME X (Strip Poker), and CONSEQUENCES. Four games ranging from the serious to the ridiculous. All good fun - nothing offensive. Needs at least 3K expansion. £5.99\*

## HISOFT PASCAL DEVPAC

### Quality ZX SPECTRUM\* Software

#### HISOFT PASCAL 4T

I haven't seen any other compiler that could match Hisoft's Pascal Using the Spectrum Micro - Autumn 1983  
"This is a very impressive product ... of benefit to any Spectrum programmer ... David Bolton ZX COMPUTING Aug/Sept 1983

Just two comments from full length reviews of our powerful and virtually full implementation of Standard Pascal. The advantages of using Pascal are well-known - fast, self-documenting, and above all, structured programs and now with Hisoft Pascal, you can reap all these benefits on a wide range of home computers, including the 48K Sinclair Spectrum! Hisoft Pascal produces programs that run typically 40 times faster than equivalent ZX BASIC programs and, sometimes, up to 1000 times faster!

Hisoft Pascal supports FOR DO WHILE DO REPEAT UNTIL CASE OR, INTEGERS, REALS, CHARACTERS, RECORDS, POINTERS, SETS, ARRAYS etc. etc. etc. it is not a Tiny Pascal - it is a virtually full implementation of the language allowing the user to develop true high-level language skills while attaining a working speed close to that of machine code. Complete with a 70-page manual!

#### HISOFT DEVPAC 3

DEVPAC is most highly recommended. The documentation is first class. Your Computer May 1983

"If you write programs in machine code, buy DEVPAC - it is the best currently on the market" Adam Denning, ZX SOFT in Which Micro September 1983

Two comments from reviews of earlier versions of DEVPAC - now we have DEVPAC 3 available - a powerful Z80 assembler will create from assembly, assembly from tape (to make corrections), very large code files (ORG, EQU, DIB, DEFS, DEFW, DIFM, labels of any length) - a 'text' processor for files (EDIT - new commands, unspooling, assembly programming, B is a one's stop there DEVPAC 3 also a 'mathematical' debugger - an assembler giving you a front panel display of the Z80, 8080 and knowing exactly a debugging of your machine-code program including single stepping program, EVEN IN ROM! Open up the secrets of low-level programming with DEVPAC 3.

Prices:

Hisoft Pascal 4T (ZX SPECTRUM) £25 inclusive  
(NewBrain, Sharp MZ700 etc) £36 plus VAT

Hisoft DEVPAC 3 (ZX SPECTRUM) £14 inclusive  
(NewBrain £25 inclusive)

\*\*\* STOP PRESS \*\*\* Hisoft Pascal for the SPECTRUM now comes complete with a Turbo Graphics package allowing fast and easy production of complex graphic displays

# Tony Bridge's Adventure Corner

## Hero of heroes

**T**his week some more HHOF: Darren Buckley, with 82.5% on his CBM64. Donald Hindmoo: the question you ask about *Pimania*, Donald, will lead you to you completing the adventure, so I won't help you, but it might be worth thinking about the mathematical symbol,  $\Pi$ , and another representation of it. This might give you some idea of the gifts to take into the Caverns of Ivory. Martin Otway, with a score of 12.5% — the Commodore version, Martin, uses this method to denote 102.5%. David Atter and Andrew McNeil with 75%. Steven Patullo, with 78% — Steven got round the annoying habits that Gandalf has by the simple method of shoving him in the chest at the very start! Steven also says that he killed the Dragon himself and thinks that Bard is useless — you are unique, Steven!

Gregg Reid, with a score of 80%. Gregg managed to cleave the hideous Goblin's skull by throwing dead Gollum at him! Mark Nelson, of Tamworth in Staffs. Thanks for your kind remarks, incidentally. Mark, and I hope you enjoy *Ship of Doom* (try melting the ice).

Michael Woodman and Jonathan North with various scores between 82.5% and 97.5%. Christopher Dale with 87.5%. In *Knight's Quest*, try using a bit of force with the steel bar to open the grating — the rope will uncoil itself when the time comes for you to use it.

Andrew Barton, 72.5% on his Spectrum. Andrew mentions the Red, Golden Dragon

that I was talking about some weeks ago. Then, I thought that it was unique to the Commodore version, but Andrew tells me that he has come across it on his Spectrum, and a friend with an Oric has also found the bug. Andrew Simla of Edgeware, with 47.5% — not the highest score! In answer to your question about *Ship of Doom*, Andrew, how would you get a drink from a barman in real life? Try climbing on the table in *Golden Apple* in order to reach something interesting — the safe will be useful right at the end of the adventure when you have found all the treasures.

**R**osanna Corns, of Enfield, with 105% on her Spectrum (I don't often see such a high score on this machine). Rosanna says "I felt Thorin in the Goblin's dungeon, killed no goblins and didn't have the golden key. The trick seems to be to go down on a barrel several times, and also, go through all the doors in all directions. My mother now tries to do the adventure with a minimum score. This can be fun as it involves going down the forest road without the ring! Another good trick is to send the butler down on a barrel and get him to capture first Bard and then the dragon. You can get one to kill the other in the comfort of the dungeon!"

Martin Hagen, 70% with help from Paul Gibbs and brother Russell. Well, Bilbo didn't do it on his own, did he? My high score for HHOF is 942 (87 monsters and 6 rings). A Glover with 60%. Although the side door is not essential to solving the adventure, the way to get into it is by asking Thorin to use Thrain's key (in fact, it's always a good idea, in this, as in many other adventures, to ask other people to do your dirty work). R Howick of Dunstable, with 95%.

To finish this week — there are some more names to add to the HHOF next week, and some hints/tips — I'm going to quote at length a letter from Paul Duffield, which will give an idea of the way in which *The Hobbit* plays. This may be of use to those of you who may be undecided about buying this great adventure (and also, incidentally, shows how important reading the book can be).

"As a dedicated Tolkien fan (I've read just about everything he's written, and *The Lord of the Rings* at least 30 times!), I was familiar with the characters and locations —

the Trolls gave me some trouble, though; in the book, they catch you, and Gandalf helps you to escape. After a few low-percentage deaths the solution dawned on me and I went to Rivendell, suitably fitted out with sword and rope.

"My knowledge of the book suggested that capture by the goblins was the next step, and after a rest for some food at Bearn's House, this was quite easily accomplished. Escape from the goblins required some thought, even with the benefit of the clue provided, but eventually I got through the window. I was stuck here for some time, and I think this is the most frustrating part of the adventure, due to the goblins (are there really only five?) taking so much pleasure in cleaving skulls. Having died, and re-started several times, I was near to a nervous breakdown, which wasn't helped by the Wood Elf!

"After a pleasant chat with Gollum, I persuaded the Wood Elf to incarcerate me in his dungeon. I think the clue here gives too much away, and I was soon riding the Barrel to Long Lake. Bard was most co-operative, if not talkative, and I soon had the treasure, and a dead dragon. Wondering how to get home, I wandered about a bit in the vicinity of the Lonely Mountain. A few trips to and from Laketown later, I was in the Waterfall. The spiders got me in the forest, and I died with a score of 87.5%. [There follows an account of Paul's voyages around the middle earth]. Eventually, I got Elrond to help me with the treasure and I was soon back in Rivendell with a large inventory and a score of 100% (7100%).

"Not being able to enter my Hobbithole, because it was too full, was a little perturbing; I had visions of the place being ransacked by the Sackville Baggins!

"I suppose it's nice to be Hero of Heroes etc, but I was disappointed to have completed what is a truly superb adventure — do other adventurers feel the same way?

"Anyway, there it is, I now await Melbourne House's next offering, although I expect to find it more difficult as I'm not a fan of Sherlock Holmes. Is anyone working on a *Lord of the Rings* adventure, or wouldn't it fit into 48K?"

As far as I know, Paul, Tolkien's publisher's will not allow a computer version of the great work — it would probably be in three or four separate parts, a la *Wrath of Magra*, but we will be very lucky to ever see it, I'm afraid.

## Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair — help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may

be able to help

Remember — the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Adventure Problem \_\_\_\_\_ on (micro) \_\_\_\_\_

Address \_\_\_\_\_

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

## Spectrum 48K

Historical Wargaming

**AUSTERLITZ £9.50**

This game is a recreation of Napoleon's famous victory at Austerlitz. You are Napoleon.

The computer provides a highly sophisticated opponent with 90% of the program written in machine code. All the mechanics of wargaming, such as movement, combat, terrain effects, reports etc are taken care of by the computer. The game is for one player only with 3 reversals of difficulty and is played on a physical map of the battlefield.

**PACIFIC WAR £6.00**

**MIDWAY £5.25**

Relight the aircraft carrier battles of World War 2. The player controls the American forces, your computer the Japanese. Full screen display of task forces and aircraft movement. Includes aerial photos, and includes a higher defence of ones own carriers and allows the player to control the detailed actions of each aircraft carrier from within its own status display.

## SUPAPUNTA RACING FORECASTER

FOLLOWING THE SUCCESS OF LAST YEAR'S PROGRAM WE PRESENT THE 1984 FLAT SEASON EDITION OF THIS MOST COMPREHENSIVE SYSTEM

Data is entered from the Racing Section B either a morning daily, or the specialist WEEKENDER paper. Depending on the depth of analysis required, data-entry time can vary from 5 to 30 minutes per race.

**FACTORS CONSIDERED BY THE PROGRAM INCLUDE:**

- ★ TRAINER RIDER WINS AT PRESENT VENUE
- ★ DRAW & GOING ADVANTAGES, IF ANY
- ★ PAST COURSE, DISTANCE, COURSE & DISTANCE WINS
- ★ TEN-YEAR TELL-TALE ANALYSIS PROCEDURE

Already included on the tape and advised from within the program is the top ten Trainer Jockey records for ALL 120 courses.

As an added valuable bonus, SUPAPUNTA has the facility to alter the significance of any or all the above variable factors and re-compute winners accordingly. This feature enables rapid development of user's own system, if required.

Seasons/Updates available on a fixed fee basis at £3.50 + postage.

Cassette versions available for — DRAGON 32/64, SPECTRUM 48K, ELECTRON.

Model B £8.00 inc. 1145E STATE MACHINE.

Microdrive version (Spectrum 48K only) £11.00 inc.

Amstrad only, never free.

## Smooth graphics

A Carrington of Solihull writes:

**Q** I would like to know how smooth graphics are created in machine code on the ZX Spectrum. I think that this is an issue that has eluded many programmers as none I know are able to help me. Perhaps an article on the subject would be in order.

**A** Machine code graphics on the Spectrum, or indeed any other machine, would make a good subject for a series of articles in any magazine. However, I think that you would find a book *Supercharge your Spectrum*, published by Melbourne House, very useful. It deals with a number of routines for controlling screen output (scrolling, partial clearing, etc).

The big advantage of such a book is that it gives you a base from which you can build your own library of graphic routines.

## CP/M on loan

David Brown of Whitby, North Yorkshire writes:

**Q** I have recently upgraded my computer to run CP/M software and remember reading somewhere recently of an organisation which loaned out or gave away CP/M programs. Can you help with an address or contact?

**A** I'm afraid not. I have not come across such a benevolent organisation, and I must confess that I would be surprised if one existed. The problems associated with lending or giving away CP/M

software, much of which is licensed for use only on a specific computer are very great. However, if any of you out there know differently please let me know.

## Information transfer

Scott McFarlane of Edinburgh writes:

**Q** Could you please tell me something about the Micro-myle acoustic modem. I know it is cheaper than the Prism, but can I get on to Prestel or Micronet with it and is it prone to interference as I have heard?

**A** The Micro-myle is a software controlled acoustically-coupled modem aimed specifically at Spectrum owners. It uses the cassette port rather than the more standard RS232C serial interface.

It can't be used to communicate with Prestel or Micronet, or indeed any of the numerous bulletin boards. It can, however, be used to allow quick and easy transfer of information between Spectrums. It transfers data at a rate of 1032 baud rather than the more normal 300 baud.

All acoustic modems are prone to interference of one sort or another, from CB radio to had telephone lines. The Micro-myle is no worse in this respect than any other acoustic modem.

## Suitable conversion

Kit Waters of Camberley, Surrey writes:

**Q** After reading from many sources how the Dragon 32 and Tandy machines are basically similar, I decided to try a few Tandy programs on my Dragon 32.

The result was not altogether a surprise; similar they might be, equal they are not. The main problem I am having is finding a suitable conversion for DEF INT and DEF DBL; can you help?

**A** DEF INT and DEF DBL set up special types of variable. The first established an Integer variable (no decimal places) and the second an integer variable of double length (8

bytes). Normal numeric variables will be OK for this purpose as long as you remember to keep removing the fractional parts of any calculations (using INT or CINT).

There is a book *Hot programs to feed your Dragon & Tandy Colour Computer* which sounds right up your street. It contains a large number of programs, including a Tandy to Dragon converter (and vice versa). The book costs £6.95 and is published by Sigma Technical Press.

## Not complete

Malcolm Irving of Houghton-le-spring, Tyneside writes:

**Q** I have a Vic 20 and will soon be getting a 64K Ram pack. Do you know if I would be able to play CBM64 games on it and if I would be able to use CBM64 cartridges on my Vic if I had a 64K Rampack and a motherboard.

**A** As the CBM64 and the Vic 20 are not compatible I am afraid the answer to all your questions is a definite no.

Even with a 64K rampack, you will not be able to use any CBM64 software of any type on your machine because the operating systems and memory maps for the two machines are different.

## Bulletin service

WIC Mitchell of South Shields, Tyneside writes:

**Q** I own a 16K ZX81 and printer and I would like to access Viewdata. Is this possible with my machine? Apparently, Maplins offer a suitable 300 baud modem. Could you give me some more information about it please? Also, what 300 baud services are available?

Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem **Peek it to Phil Rogers** and every week he will **Poke** back as many answers as he can. The address is **Peek & Poke, PCW, 12-13 Little Newport Street, London WC2R 3LD.**

**A** It is not currently possible to access Viewdata with your machine I'm afraid. Although the Maplins modem is suitable for the ZX81, it runs at 300 baud and not the 1200 required for Viewdata type systems.

The Maplins modem uses a standard serial RS232C interface to the computer (also supplied by Maplins). The device is supplied in kit-form and is a very cheap way into the communications area. 300 baud services are typically of the bulletin-board type and these are usually free. There are a number of such services in the UK and overseas.

## Sord programs

F. Woonkey of South Yurdley, Birmingham writes:

**Q** Is there any way of converting programs written for the Spectrum, BBC etc for use on the Sord M5? I have seen plenty of books concerning other micros, but nothing on the Sord. What I want is a book called something like *Understanding your Sord M5* — do either you or your readers know of a book such as this.

**A** Firstly, converting programs written for the Spectrum or the BBC to run on the Sord will be no easy matter.

Basic programs will be bad enough because of the differences in dialect from machine to machine and machine-code programs will be virtually impossible to convert, because of the different memory mapping of the various machines.

You may be able to convert some smaller Basic programs, but I would not attempt anything too big without all the necessary manuals.

I'm afraid I have not come across the book you want which is surprising as all the other popular micros have at least one like that.

**Dungeon Adventure** on BBC. How do I deal with the Black Sphere? What should I do about the boat or the Zombie. A. R. Michael, 33 St Cross Road, Winchester, Hants SO23 9JA

**Lost City** on BBC. How do I get out of the valley? N. Changan, 59 Frederick Road, Leicester.

# commodore FASTBACK IS HERE

A TYPICAL COMMODORE 64 OWNER WAITING FOR A PROGRAM TO LOAD FROM TAPE... BUT NOT ANY MORE!

At last a utility that provides fast-loading FASTBACK allows multi-part software to load around 10 TIMES FASTER and run independently of the utility. For example 'load The Hobbit' in 150 seconds with FASTBACK. Supplied on tape with full instructions.

ONLY £9.95

## THE AMAZING NEW PROGRAM FOR THE 64

Gives unlimited vocabulary and can be incorporated into your own programs using "SPEAK" as a basic command.

ONLY £7.95 NOW YOUR TALKING!

## AND FOR DISCO

Our latest and most sophisticated Tape-to-Disc utility is so easy even a child can use it. DISCO creates its own buffer steps to ease the job of transfer. All programs auto run once transferred. We guarantee this is the best Tape-to-Disc you can buy. Supplied on tape with full instructions.

ONLY £9.95

## TAPE TO DISK TRANSFER UTILITIES-

Transfer games etc. to disk. Supplied on tape with full instructions for:

BBC ATARI (All models) £9.95

**DATA RECORDER**  
From the same factory as the C2H - the Super Dump. £16.64 Data Recorder (no interface required) £29.95

A HUGE RANGE OF SOFTWARE & BOOKS FOR BBC, ELECTRON, SPECTRUM, COMMODORE 64, VIC 20, ORANGE, DUNLOP, MICROTECH, etc.  
Trade and Over 24hrs Delivery  
All orders include a free 1000 word computer glossary.

## BIGGER AND BIGGER

Alice in Videoland is a program for the Commodore 64 that had people gasping in disbelief at the graphics and sound when demo versions of it were shown by Audiogenic at shows last year.

The program is now available and is essentially four arcade games linked together by theme and the fact that success in earlier sections affects your performance later on. Even playing very badly, though, it is possible to play each section.

Because of the size of the game new sections have to be loaded in from disc — no tape version of the game is available. The first, and most frequently viewed section is not part of the game at all but a title screen where Alice, in a forest setting, follows a bouncing rabbit to the site of a rabbit hole in the accompaniment of a specially composed music and the swooping of birds. It's spectacular except for the rotten 64 scrolling which means the top of the screen moves faster than the bottom (slow processing time).

The game proper begins as Alice descends down the rabbit hole and finds a variety of mysterious objects which she must catch in her basket, which itself must be caught, as she floats down — cakes, bottles, keys, etc.

In part one, section two Alice can use the things she has collected — keys unlock doors and bottles and cakes make her smaller and bigger. The more Alice has collected, the wider area she will be able to explore and the more points will be gained.

The second section has Alice by the magic mushroom and Cheshire cat — she must jump up to catch bread and butterflies and rocking horse flies — the latter turn into balls and are used in part four. Alice is made bigger and smaller by eating different sorts of mushrooms.

Section three involves a chess board, a jabberwocky, and Tweedledum and Tweedledee, two knights and Alice. You have to use the Knights to help Alice across the chess

board. The final part has Alice playing croquet with a flamingo — she has to hit balls with it bouncing them against a bush and a fence through a card soldier hoop — the balls earned in part two help her up her score.

There is a continuous musical soundtrack which is cleverly arranged and suitably demented (like a ten year old Jean-Michel Jarre) and you are unlikely to find much better graphics on any other 64 game. My feeling, though, is that although the games are not awful to play — they are not tremendous either. At £12.95 it is reasonable value for money.

**Program** Alice in Videoland

## GIANT CAMELS

There being so little of it, I feel duty bound to mention some independent Atari software and it comes from Llamasoft. Jeff Minter has converted *Attack of the Mutant Camels* — his CBM 64 meisterwerk — for the Atari machines.

For those not familiar with Jeff Minter's style, giant camels threaten to overrun the earth by spitting laser. You

have to blast away at them in your tiny spacecraft and save all humanity.

Using sundry machine code cleverness, you actually see the beasts plodding relentlessly across the landscape (all 10

## Pick of the week

## SERVE AND VOLLEY

*Match Point* is the latest game from Psion who have otherwise all but left the Spectrum software market. The timing for release is, of course, impeccable and so is the game.

Quite simply you play tennis moving a little man left and right, towards the net and away from it — you can play against the computer or another player.

Obviously when you reduce a game as complex as tennis to up, down, left, right fire (well, swing hat to be exact) you're going to lose something — but less than you'd think. The movement of the ball has been arranged with astonishing precision: you can radically affect the kind of return by how close you are to the net or whether your return is forehand or backhand.

There are a vast number of game permutations: one or two

player, keyboard joystick, keyboard control keys and

whether you're playing quarter finals, semi finals or finals — this latter set being the skill level effectively. The graphics are wondrous, complete with ball boys who run on to get the ball if it goes into the net.

**Program** Match Point

## EXCELLENT GRAPHICS

*The Hulk* is a graphics adventure from Adventure International based on the popular comic book character and written by Scott Adams. Versions are available for several machines but the company are particularly proud of the Spectrum version which they say has 'the best graphics ever seen in an adventure game' — the BBC edition, incidentally, doesn't have any graphics at all.

Rising to such bait I inspec-

ted the Spectrum version closely — actually I think the graphics are excellent and certainly as good as the *Hobbit* with an authentic real comic book flavour, although they only fill a third, as opposed to two thirds, of the screen.

Of the adventure itself, one must be more circumspect — it only understands two word commands 'take this' 'drop that' etc which is fairly primitive by present Spectrum standards; on the other hand coming as it does from the twisted mind of Scott Adams, the clues are fantastically challenging.

The opening page has you as Dr Bruce Banner tied to a chair and trapped. The general gist of solving the situation is not hard to grasp: 'become the hulk' but how? — the solution was discovered via a jokey suggestion in the *Popular* office — sneerers were horrified to see the screen change and the Hulk appear. The suggestion? Now that would be telling.

## PLANNING AND LOGIC

You cannot have failed to notice that we at *Popular* think pretty highly of *The Quill* — what it meant, apart from anything else was that it became possible for people with good imaginations and no programming skill to create complex machine code text adventures. Recent months have seen the release of dozens of good text adventures using the system.

Now Gilsoft have adapted the system for the Commodore 64 which is in even more dire need of good text adventures than the Spectrum was. The system works in the same way as on the Spectrum, although obviously there is a bit more memory to play around with and greater scope for sound manipulation.

What *The Quill* does demand is some planning and logical thought. Using a variety of menus, you tell the system what the rooms are, ie, what description is in each and how the rooms are connected. You then have to decide what objects are where and arrange the 'flags'. These are a means of determining if an object is present or if an action has been taken and thus provide the means to constructing the basic

conundrums that are the whole basis of adventures.

The program enables you to 'run through' a program with diagnostics — a screen display of the state of the flags, etc, to check that the game works as you intended it to. The program comes with an extensive manual that explains it all pretty well, but as I say it needs some work on the adventure designer's part. Highly recommended

## BULLSEYE

In *Dartz Automata* gives that well known sport beloved of enormously fat Northern men its own treatment. Not content with providing a pretty fair computer impersonation of the game, extras are provided in the form of punts of beer supplied by obliging fans which steadily affect your aim.

Basic idea is to stop a cursor which is moving around a dartboard. When it comes to the number you require then stop another cursor which pin points the exact section you require — treble, double, bull etc.

There are a variety of different games available 1 or 2 players, 501, etc and technically the game is one of Automata's best — quite a while with good sound and graphics (particularly the little darts player who represents 'you' and throws the darts and drinks the pints).

**Program** *Dartz*  
**Price** £5  
**Micro** Automata  
 70 Highland Road  
 Portsmouth  
 Hants

## HYSTERICAL

*Hercules* is an exceedingly strange Miner style game for Commodore 64 based loosely

on the trials of Hercules. Over 50 screens you have to find your way to various different objectives — this involves moving Hercules (who still has his hair I'm glad to say) in the classic left, right, jump, across ledges, podiums, ropes and other things.

What makes the game different is that in many cases there is no obvious way to get where you want to go, although you know it can be done — the solution often involves a risky leap into mid air, occasionally a step may appear. Another problem is that if you spend too much time pondering your next move, the platform you're standing on is very likely to burst into flames.

I was hooked; the graphics are nice and the music effects wonderfully hysterical (loud and shrieking). I expect the game to do well — particularly since the company putting it out are backed by Island records who are planning a TV campaign to promote it. There are claims that the game is better than *Manic Miner* — I'm not sure about that but Miner fans will certainly enjoy it.

**Program** *Hercules*

**Micro** Commodore 64  
**Supplier** Interdoc  
 249-251 Kensal Road  
 London W10 5DB

## SPRITE CREATION

*White Lightning* may, at first, seem like another 'design games' utility for the Spectrum but, in fact, it is radically different from previous offerings.

*White Lightning* is essentially two things: a Forth program and a sprite program which have been designed to work not only together but under interrupt control; ie, one routine carries on happily at 50 times a second oblivious to the conventional execution of another section of program.

Whilst the basic White Lightning language is essentially Forth, you can run programs from Basic if you want whilst you get familiar with Forth syntax.

The sprite creation is very sophisticated — sprites can be larger than a screen and up to 255 sprites can be used at the same time. Priorities can be given and the usual kinds of collision detection are allowed for.

As you might expect, there is a pretty vast manual of over

130 pages which explains how the whole thing works, as well as a demo program. This is certainly not a program for the beginner, but for those prepared to spend time with it, I suspect the possibilities could be endless.

## PROVERBIAL

*The Art of Computer Conversation* describes itself as a book about making computers 'people literate' in contrast to the idea of making people 'computer literate'.

A quick description of the book could be that it is about 'interacting with computers' but that doesn't capture its vast scope — it turns out that the issues involved in 'interacting with computers' range over an enormous field, much of it having almost nothing to do with computers at all.

Rather than summarise the whole book in a few paragraphs, here's a quick list of topics covered: conversation, adventure games, interactive novels, expert systems, record players, experts, user expectations, Hal, robots, personality, Alan Turing, graphics, icons, Shrdlu, marketing, training, manuals, Eliza, and morality.

All the major points are covered in a series of proverbs — in fact, the whole thing is written in a sort of irreverent, everything is pretty cosmic, hey, wow style, that, if it borders on the pretentious, also makes the book much easier to read. I liked it a lot.

## SOUND & VISION

Melbourne House's *Commodore 64 Sound and Graphics* is not so much about sound and graphics as a series of fairly complex machine code routines to enable you to make better use of the sound and graphics. It is, if you like, an upmarket listings book.

That said, the notes that surround the listings that form the chapters of the book are thorough, if technical and some of the listings are very useful indeed. There are programs here for various kinds of scrolling, different character sets, music creation and so on, mostly written in code for speed and efficiency. There are even a couple of games illustrating the sound and graphic techniques.

## Thinking Logo

**A**t the end of education there has been no improvement in the thinking ability of children — in fact there has actually been a deterioration (Edward de Bono in *Children Solve Problems*).

With television programmes about his techniques for learning how to think, and the *de Bono Thinking Course* being used by companies of many shapes and sizes, Edward de Bono is almost an establishment representative of radical approaches to the learning of thinking.

De Bono comments that in a survey of inventive people the only uniform characteristic was their use of drawings and sketches in their thinking.

Furthermore, he notes that young children are not always very good at expressing their ideas in words, but they can often communicate clearly through drawing.

The emphasis on the visual as a means of helping in learning to think suggests a similarity between the de Bono approach, and that associated with Seymour Papert (through use of Logo).

The most immediate impact of Logo is its use of Turtle Graphics, which is highly visual. And the main objective of Logo is to assist in the learning of how to think.

There are, however, important differences between Papert's approach and that of De Bono.

De Bono seems to be arguing that the possession of knowledge is far less important than an ability to think. 'Thinking' should be

part of the curriculum, alongside more conventional subjects. The use of visual methods of learning, and in thinking, is to be highly recommended.

And that to learn how to think one needs to follow a structured course of study, so that people can learn from each other — if situations are unstructured then people will be working on projects so varied that the likelihood of learning from others is diminished.

Papert's approach is different. He also believes that education does not teach people how to think, but neither does he think that 'studying' how to think is the answer.

His computer language Logo is designed not just to help children teach themselves basic rules of thinking and problem solving, but also to assist in the learning of basic knowledge skills of numeracy and literacy — the limits to Logo are set by the individual.

Both Papert and de Bono agree on the importance of the visual in the enhancement of the learning process. But, whereas de Bono concentrates on diagrammatic forms of representation, Logo provides an extremely flexible visual device for exploring mathematics and the world of words.

De Bono separates thinking from knowledge, and assumes a curriculum, whereas the whole ideal of Logo is that the child constructs its own curriculum, with support from the teacher as necessary. A Logo system on a home computer helps the child learn, without a teacher or a curriculum.

Whereas de Bono sees the teaching of thinking as 'teaching', following a structured course/curriculum — with every person following a similar course, Papert sees the child as directing its own study, and learning from others through discussing the many different results of self-direction.

Logo is also admirably suited to collaborative enterprises, to experimentation. In Logo, errors are not mistakes, they are opportunities to improve one's understanding.

The de Bono style of presentation of thinking has been very successful, but it is less radical than the approach embodied in Logo.

And there are good reasons to believe that, in the two, Logo is the more comprehensive and useful approach.

Boris Allan

## Leave it to Hackit

### Puzzle No 115

*Hackit* proved to be a very popular piece of software. No longer do you need to actually write programs — *Hackit* does it all for you.

That is, it's a program to write the program to run the computer!

All you do is feed in the features that you wish to use and leave the rest to the program. It's quite reasonably priced, too, at somewhere between five and ten quid, and I understand that over the last couple of years since it went on sale, the demand has been such that the copies are snapped up as soon as they reach the shops. To date, total sales have reached the grand total of one hundred and sixty thousand pounds and one penny!

The weekly production rate has been constant since the program went on sale. Can you say

**> 10 PRINT "PRO  
GRAM"  
20 GOTO 10  
30 REM CLONE!**

how many have been produced each week, how many weeks they have been on sale, and the price of each copy?

### Solution to Puzzle No 110

The program calculates all possible totals obtainable with different combinations of the coins (with at least one of each denomination present), and then scans the array to determine which values are obtainable in twenty-eight ways.

```
110 DIM AMT(190)
20 FOR B = 1 TO 530
30 FOR C = 1 TO 5
40 FOR D = 1 TO 550
50 FOR E = 1 TO 5
60 LET T = 1*B + 2*C + 5*D + 10*E + 20*F
70 LET AMT(T) = AMT(T) + 1
80 NEXT F
90 NEXT E
100 NEXT D
110 NEXT C
120 NEXT B
130 NEXT A
140 FOR N = 1 TO 190
150 IF AMT(N) = 28 THEN PRINT N
160 NEXT N
```

This gives two results 85 and 143, but, as the total must be a multiple of five, the correct total cost was 85 pence and each ice-cream was 17 pence.

### Winner of Puzzle No 110

The winner is: John Harrison, Chapel Lane, Long Marston, Tring, who receives £10.

### Rules

If the puzzle can be sensibly solved using a computer then the winner will have included a listing of the program used to find the correct answer. The closing date for entries to Puzzle No 115 is July 27.
